Customer Reviews

I find the book, "Curing hepatitis C," useful, informative, and of extreme value. It filled many gaps in my knowledge. Of particular importance for those considering delaying treatment, because of the promise/hope of future HCV treatments, are the sections on "The future of HCV treatment," and "Re-treatment after prior treatment with direct acting antivirals." While some of the materials on future paths are pure speculation, given that these "future" drugs are in trials, the information is nevertheless timely and important. Of great value was the discussion on the differences between alpha-interferons and lambda-interferons. The distinctions are subtle and not appreciated, I am sure, by most. In the "Acknowledgments" Dr. Everson explained that he included quotes and comments from patients so that the book was more than a series of "dry" facts. To be sure, this text is filled with facts. Important facts for those with HCV, and for their families. The comments and discussion lend a certain human element to the discussion. An important element, in my opinion, if for no other reason than to provide insight into the struggles of patients past, future, and present. The human element adds character to the book. It seems I have considered the end and then the beginning. That is so because of my intense study of the subject. I have in fact gleaned much of the information contained herein in my education on this disease. I have studied the viral kinetics models for genotypes 1a and 1b for the currently approved triple therapies [see Rong, et al., "Rapid emergence of protease inhibitor resistance in hepatitis C virus," Sci. Transl. Med. 2(30) (2010)].
