To "Go New" or not: That is the question. I wouldn't, but I already have my M.Ed. If you're just starting your career as a teacher, or just starting to learn about becoming a teacher--especially of exceptional children--you'll probably get a lot of use out of this text. It's an excellent reference. Indeed, this book has a ton of information in tiny print on glossy pages. It breaks up information to insert helpful teaching aides or stories about teachers doing the right things--which, on their surface are very helpful. I have no complaints about the content. But the format! The organization! Ugh. THINGS TO NOTE: When I'm reading about a technical topic, I don't want the information interrupted mid-paragraph or mid-section for a two-page spread about a teacher who is using a technique I read about three or four pages ago (or will read about in another page or two,

under a separate subheading). Finish the section and then give me examples, or give me examples and then explain them in the section. Don't break up an unrelated section just to put in your colorful insert (and they are very colorful) before the chapter ends. More, I don't want to see charts several pages away from the information they're trying to explain. I don't want two or three pages of charts in the middle of one section of text. I hate flipping back and forth, and flipping back and forth feels like all I do with this book. OVERALL: Again, the content is wonderful. I found the text balanced, fair, insightful, helpful, and up-to-date. But I couldn't get past the formatting.
