Synopsis

Fecal transplantation is becoming more and more accepted to treat some diseases of the gastrointestinal tract (or "the gut"). Although it’s new and seems disgusting, the future of this technique as a treatment option for gut disorders, is expected to include irritable bowel syndrome, the commonest functional bowel disorder. The current (IBS) available research indicates that IBS responds very well to fecal transplantation, and may be even cured. In this short read, you will discover how fecal transplantation can induce normalization of abnormally irritable bowel, and how it’s probably the only available or known treatment strategy that targets the real cause of IBS, which the "bad bacteria" in the bowel.
